Trans. from [Nauchnyye Doklady Vysshykh Shkol.

DESCRIPTORS: *Thallium compounds, *Chlorides,
*Vapor pressure.

The saturation vapor pressure of chemically pure
thallous chloride was determined by the boiling point
and the saturation methods. The values obtained with
both methods were in good agreement above about
620°C, indicating that thallous chloride in the vapor
phase consists of monomeric molecules. Below about
600°C, the points obtained by the saturation method are

The partial molal volumes of hydrogen and nitrogen in
their mixtures at temperatures ranging from zero to

from P-V-T data. The rule of Lewis and Randall
was found to hold fairly well for the fugacity of
